

LM2931

Series Low Dropout Regulators

General Description

The LM2931 positive voltage regulator features a very low quiescent current of 1mA or less when supplying 10mA loads. This unique characteristic and the extremely low input-output differential required for proper regulation (0.2V for output currents of 10mA) make the LM2931 the ideal regulator for standby power systems. Applications include memory standby circuits, CMOS and other low power processor power supplies as well as systems demanding as much as 100mA of output current.

Designed originally for automotive applications, the LM2931 and all regulated circuitry are protected from reverse battery installations or 2 battery jumps. During line transients, such as a load dump (60V) when the input voltage to the regulator can momentarily exceed the specified maximum operating voltage, the regulator will automatically shut down to protect both internal circuits and the load. The LM2931 cannot be harmed by temporary mirror-image insertion. Familiar regulator features such as short circuit and thermal overload protection are also provided.

The LM2931 family includes a fixed 5V output ($\pm 3.8\%$ tolerance for A grade) or an adjustable output with ON/OFF pin.

Both versions are available in a TO-220 power package, TO-263 surface mount package, and an 8-lead surface mount package. The fixed output version is also available in the TO-92 plastic and 6-Bump micro SMD packages.

Features

- Very low quiescent current
- Output current in excess of 100 mA
- Input-output differential less than 0.6V
- Reverse battery protection
- 60V load dump protection
- -50V reverse transient protection
- Short circuit protection
- Internal thermal overload protection
- Mirror-image insertion protection
- Available in TO-220, TO-92, TO-263, SO-8 or 6-Bump micro SMD packages
- Available as adjustable with TTL compatible switch
- See AN-1112 for micro SMD considerations

Connection Diagrams

FIXED VOLTAGE OUTPUT

*NC = Not internally connected. Must be electrically isolated from the rest of the circuit for the micro SMD package.

Note: The micro SMD package marking is a single digit manufacturing Date Code Only.

Typical Applications

525404

*Required if regulator is located far from power supply filter.

**C2 must be at least 100 μF to maintain stability. May be increased without bound to maintain regulation during transients. Locate as close as possible to the regulator. This capacitor must be rated over the same operating temperature range as the regulator. The equivalent series resistance (ESR) of this capacitor is critical; see curve.

LM2931 Adjustable Output

525405

$$V_{\text{OUT}} = \text{Reference Voltage} \times \frac{R1 + R2}{R1}$$

Note: Using 27k for R1 will automatically compensate for errors in V_{OUT} due to the input bias current of the ADJ pin (approximately 1 μA).

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Input Voltage	
Operating Range	26V
Overvoltage Protection	
LM2931A, LM2931C (Adjustable)	60V

LM2931	50V
Internal Power Dissipation	Internally Limited
(Notes 2, 4)	
Operating Ambient Temperature	
Range	-40°C to +85°C
Maximum Junction Temperature	125°C
Storage Temperature Range	-65°C to +150°C
Lead Temp. (Soldering, 10 seconds)	230°C
ESD Tolerance (Note 5)	2000V

Electrical Characteristics for Fixed 3.3V Version

$V_{IN} = 14V$, $I_O = 10mA$, $T_J = 25^\circ C$, $C_2 = 100\mu F$ (unless otherwise specified) (Note 2)

Parameter	Conditions	LM2931-3.3		Units
		Typ	Limit (Note 3)	
Output Voltage		3.3	3.465 3.135	V_{MAX} V_{MIN}
	$4V \leq V_{IN} \leq 26V$, $I_O = 100 mA$ $-40^\circ C \leq T_J \leq 125^\circ C$		3.630 2.970	V_{MAX} V_{MIN}
Line Regulation	$4V \leq V_{IN} \leq 26V$	4	33	mV_{MAX}
Load Regulation	$5mA \leq I_O \leq 100mA$	10	50	mV_{MAX}
Output Impedance	$100mA_{DC}$ and $10mA_{rms}$, 100Hz - 10kHz	200		$m\Omega$
Quiescent Current	$I_O \leq 10mA$, $4V \leq V_{IN} \leq 26V$ $-40^\circ C \leq T_J \leq 125^\circ C$	0.4	1.0	mA_{MAX}
	$I_O = 100mA$, $V_{IN} = 14V$, $T_J = 25^\circ C$	15		mA
Output Noise Voltage	10Hz -100kHz, $C_{OUT} = 100\mu F$	330		μV_{rms}
Long Term Stability		13		$mV/1000 hr$
Ripple Rejection	$f_O = 120Hz$	80		dB
Dropout Voltage	$I_O = 10mA$	0.05	0.2	V_{MAX}
	$I_O = 100mA$	0.30	0.6	
Maximum Operational Input Voltage		33	26	V_{MIN}
Maximum Line Transient	$R_L = 500\Omega$, $V_O \leq 5.5V$, $T = 1ms$, $\tau \leq 100ms$	70	50	V_{MIN}
Reverse Polarity Input Voltage, DC	$V_O \geq -0.3V$, $R_L = 500\Omega$	-30	-15	V_{MIN}
Reverse Polarity Input Voltage, Transient	$T = 1ms$, $\tau \leq 100ms$, $R_L = 500\Omega$	-80	-50	V_{MIN}

Electrical Characteristics for Fixed 5V Version

$V_{IN} = 14V$, $I_O = 10mA$, $T_J = 25^\circ C$, $C_2 = 100 \mu F$ (unless otherwise specified) (Note 2)

Ripple Rejection	$f_O = 120 Hz$	80	55	80		dB_{MIN}
Dropout Voltage	$I_O = 10mA$	0.05	0.2	0.05	0.2	V_{MAX}
	$I_O = 100mA$	0.3	0.6	0.3	0.6	
Maximum Operational Input Voltage		33	26	33	26	V_{MIN}
Maximum Line Transient	$R_L = 500\Omega$, $V_O \leq 5.5V$, $T = 1ms$, $\tau \leq 100ms$	70	60	70	50	V_{MIN}
Reverse Polarity Input Voltage, DC	$V_O \geq -0.3V$, $R_L = 500\Omega$	-30	-15	-30	-15	V_{MIN}
Reverse Polarity Input Voltage, Transient	$T = 1ms$, $\tau \leq 100ms$, $R_L = 500\Omega$	-80	-50	-80	-50	V_{MIN}

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Electrical specifications do not apply when operating the device beyond its rated operating conditions.

Note 2: See circuit in Typical Applications. To ensure constant junction temperature, low duty cycle pulse testing is used.

Note 3: All limits are guaranteed for $T_J = 25^\circ C$ (standard type face) or over the full operating junction temperature range of $-40^\circ C$ to $+125^\circ C$ (bold type face).

Note 4: The maximum power dissipation is a function of maximum junction temperature T_{Jmax} , total thermal resistance θ_{JA} , and ambient temperature T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{Jmax} - T_A)/\theta_{JA}$. If this dissipation is exceeded, the die temperature will rise above $150^\circ C$ and the LM2931 will go into thermal shutdown. For the LM2931 in the TO-92 package, θ_{JA} is $195^\circ C/W$; in the SO-8 package, θ_{JA} is $160^\circ C/W$, and in the TO-220 package, θ_{JA} is $50^\circ C/W$; in the TO-263 package, θ_{JA} is $73^\circ C/W$; and in the 6-Bump micro SMD package θ_{JA} is $290^\circ C/W$. If the TO-220 package is used with a heat sink, θ_{JA} is the sum of the package thermal resistance junction-to-case of $3^\circ C/W$ and the thermal resistance added by the heat sink and thermal interface.

If the TO-263 package is used, the thermal resistance can be reduced by increasing the P.C. board copper area thermally connected to the package: Using 0.5 square inches of copper area, θ_{JA} is $50^\circ C/W$; with 1 square inch of copper area, θ_{JA} is $37^\circ C/W$; and with 1.6 or more square inches of copper area, θ_{JA} is $32^\circ C/W$.

Note 5: Human body model, 100 pF discharged through 1.5 k Ω .

Electrical Characteristics for Adjustable Version

$V_{IN} = 14V$, $V_{OUT} = 3V$, $I_O = 10\text{ mA}$, $T_J = 25^\circ\text{C}$, $R_1 = 27k$, $C_2 = 100\text{ }\mu\text{F}$ (unless otherwise specified) (Note 2)

Parameter	Conditions	Typ	Limit	Units Limit
Reference Voltage		1.20	1.26 1.14	V_{MAX} V_{MIN}
	$I_O \leq 100\text{ mA}$, $-40^\circ\text{C} \leq T_J \leq 125^\circ\text{C}$, $R_1 = 27k$ Measured from V_{OUT} to Adjust Pin		1.32 1.08	V_{MAX} V_{MIN}
