

# Reversible motor driver

## BA6218

The BA6218 reversible-motor driver supplies an output current of 0.7A (maximum). Two logic inputs allow four output modes: forward, reverse, idling, and braking. The logic section and power section have separate ground pins. By connecting an electronic governor, the IC can be used for controlling reversible, variable-speed motors.

### ● Features

- 1) Built-in surge absorbing diodes.
- 2) Small standby supply current.
- 3) Wide range of operating voltage. (4.5 ~ 15V)
- 4) Interfaces with TTL devices.

### ● Absolute maximum ratings (Ta = 25°C)
